

Notes on Design:

- Shell feels thin, maybe try extruding inside and outside to increase thickness
- Need more clearance around the mouse wheel, extend the front side?
- Extend inner lip down to the base, help to eliminate printing errors
- Push the front of the triggers up more, not enough room to click with current length
- Push up center hump up further? Increase the angle of the fingers.
- Some printing errors on the outer shell, hopefully increasing the thickness will help mitigate it.
