Apple

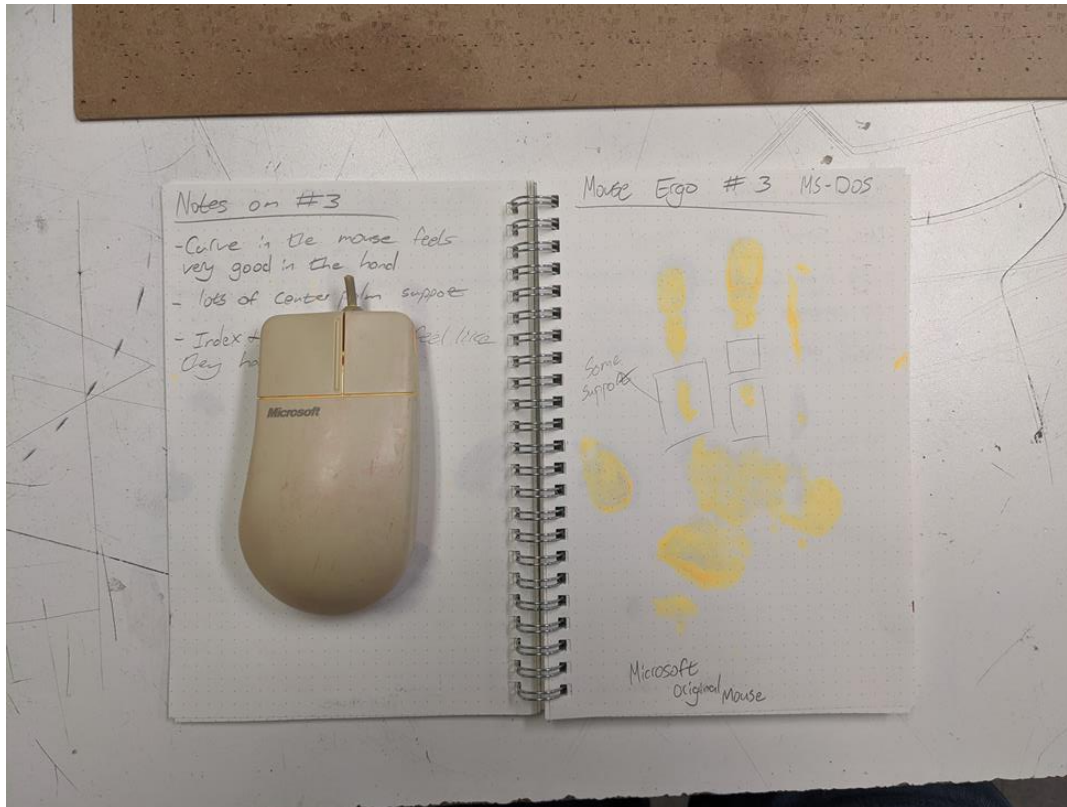

Least Favorite Mouse: Apple Mouse

- Very contours in the mouse mean there's no natural place for the E or D areas, and no comfortable support for F1 and F2.
- The small size of the mouse also means that only the tips of A1 and B1 were supported, and A2/3 & B2/3 had no contact.

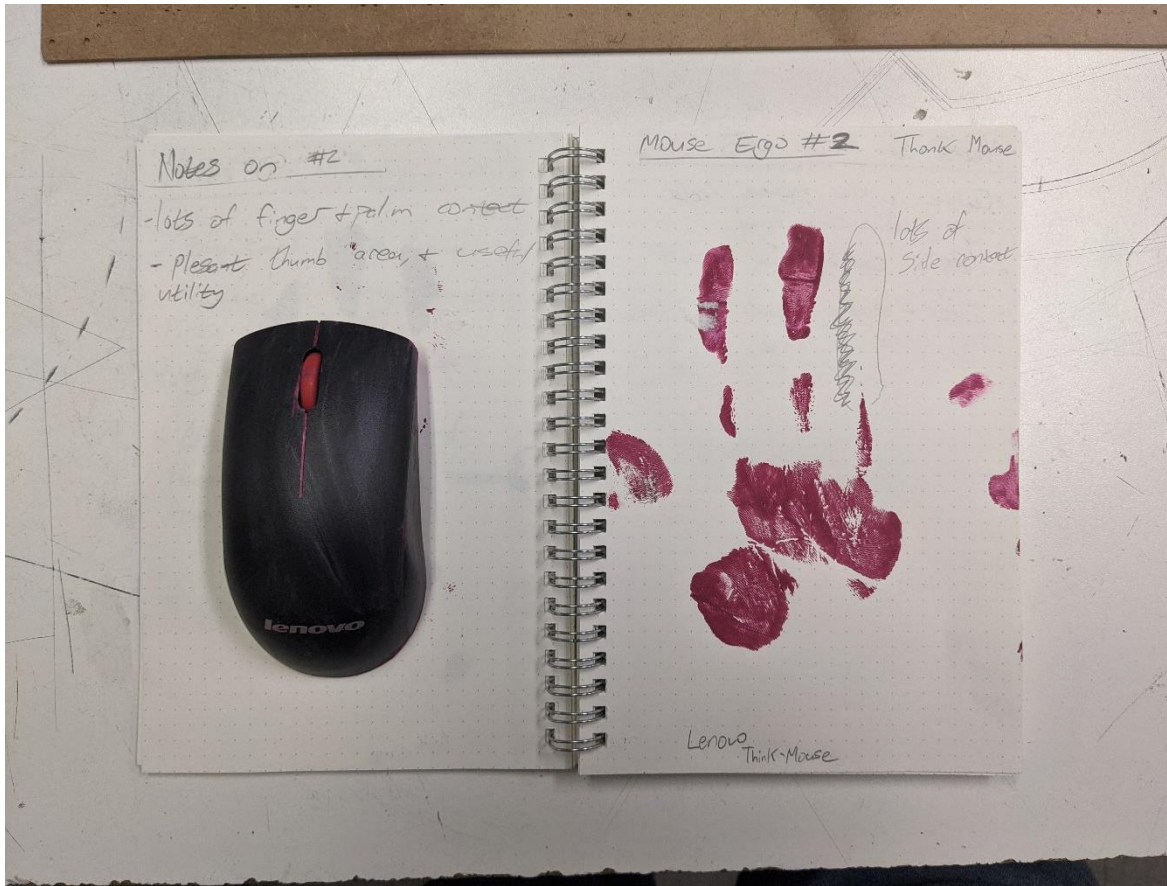

Second Worst: Amazon Special

- Good basic design, but its far too small to hold my hand comfortably
- There's a very high point in the center of the mouse that focuses most of the pressure on F1
- Due to the small size, Most of F2, and all of F3 and F4 are left on the table.
- No comfortable position for The C or D regions due to the sharp curvature

Second Best: Microsoft Classic

- The curve in the side of body helps give the E1 region a place to grip.
- Good overall palm support of the F1, F2, and F3 regions, and the curves on the right side give the left sides of C1 and C2a good place to hold onto, though the D regions are still unsupported.

Best Mouse: The Lenovo

- Overall curvature of the mouse conformed to my fingers very well, and my palm was able to cup the whole thing. F1, F2, and F3 were all solidly contacted with the mouse.
- There was a lightly concave structure on the sides that allowed the E1 region of my thumb to make very positive contact, and the entire left side of the C regions (Not transferred well to the paper).
- The comfortable support across the whole mouse makes it my favorite mouse we sampled.
